

# PRODUCT CARE

## GENERAL CARE

Jewellery should not be worn, nor sharp objects used when cleaning, to avoid scratching.

### Never use cleaning supplies containing:

Abrasives, ammonia, bleach, acids, waxes, alcohol or solvents as they may damage the overall finish.

To remove adhesive labels, apply Eucalyptus oil to a cloth, dab the Eucalyptus oil onto the adhesive label/s and leave to allow it to penetrate. This will allow for easy removal.

## MIRRORS

Care should be taken when cleaning any glass product, particularly when cleaning mirrors.

The rear surface of a mirror has a special silver coating which creates the reflective qualities that we associate with a standard mirror. The silver is protected with additional layers of protective coatings that enable the mirror to be processed and installed effectively without damage.

However, these coatings are at risk of corrosion if cleaned without due care.

Contact with the back (silver side) of the mirror should be avoided and kept free from moisture and cleaning solutions. The face of the mirror is best cleaned by placing a few drops of methylated spirits on a lightly dampened cloth.

The face of the mirror can then be polished with a dry, lint-free cloth.

## SHOWER SCREENS

Use only a damp sponge or soft cloth to clean your screen glass. Never use materials such as a bristle brush or scouring pad to clean metal or glass as this can result in permanent damage.

Cleaning should be undertaken regularly to maintain the new condition. Use pH neutral, warm, mild soapy water to wash down the entire screen.

Thoroughly rinse all surfaces with clean water ensuring all cleaning solution has been removed and no residue remains.

Wipe all surfaces clean using a damp soft cloth, sponge or equivalent.

Remember to wipe down and dry your shower screen.

Always maintain a dry ventilated bathroom.

## SPLASHBACKS

Before cleaning, wash away any build-up of fatty or greasy deposits using a soft sponge and warm soapy water.

Add a few drops of methylated spirits to a clean, non-abrasive damp cloth and wipe the splashback. Buff with a clean lint free cloth for a streak free finish.
